

FLEX SYSTEMS®

The Idle Free Flex System is an Idle Reduction Technology for work trucks with snow removal equipment. It provides hours of power, cabin heat, and engine heat for critical electric loads without running the truck's engine.

BENEFITS

- Fuel savings: One gallon of fuel is burned for every hour of truck idling
- Reduce repair and replacement cost of the Diesel Particulate Filter
- Increased engine life and decreased maintenance intervals
- All system functions are controlled by a touch screen located near the driver
 - Includes cumulative run timer for easy return on investment calculations
- Superior driver comfort and safety
- Helps fleets comply with city, municipal and state idling laws
- Reduced carbon footprint with lower CO2 emissions
- The heater is an EPA SmartWay Verified Technology

APPLICATIONS:

The Idle Free Flex System is trusted by department of transportation and municipal fleet managers using snow removal equipment throughout North America.

PROVIDES 6-8 HOURS OF:

- Interior cab heat
- Engine heat for cold starts
- Power for interior, exterior, and safety lights
- Power for communication devices
