

Coolant Circulation Pump

The Coolant Circulation Pump increases coolant flow in the Arctic Fox™ Fuel and Fluid Temperature Management Systems

OVERVIEW

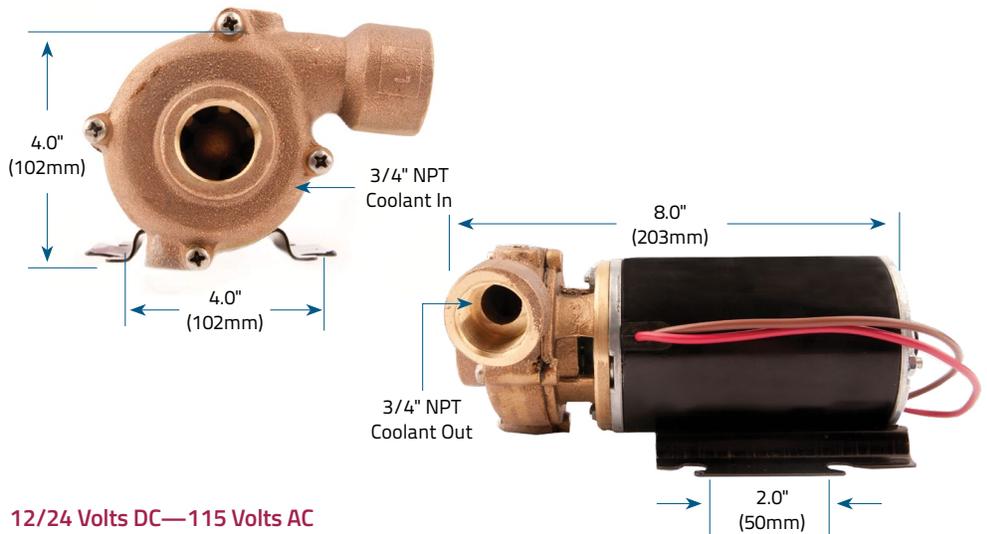

FEATURES

The Coolant Circulation Pump is used to “boost” coolant flow in Arctic Fox™ Fuel & Fluid Temperature Management Systems, when multiple heat exchangers are installed or for remote tank installations that require long lengths of plumbing.

- Available in 12 or 24 Volts DC or 115 Volts AC

APPLICATIONS

- Remote tank installations that require long lengths of plumbing

12/24 Volts DC—115 Volts AC
